

What is claimed is:

1. A pull tab of a slide fastener slider, comprising:
a core member formed by integrally joining, through
an intermediate portion, a slider body coupling member and
5 decorative members; and
a resin cover-molded around the decorative member,
through which the covered part can be seen.
2. The pull tab of a slide fastener slider according to
10 claim 1,
a part of the intermediate portion is cover-molded by
the resin.
3. The pull tab of a slide fastener slider according to
15 claim 1,
the decorative member is formed variously, and the
intermediate portion is formed in a certain shape.
4. The pull tab of a slide fastener slider according to
20 claim 3,
wherein the intermediate portion of the slider body
coupling member has a common sectional shape.
5. The pull tab of a slide fastener slider according to

claim 4,

the resin cover-molded around the various decorative member is in a shape regardless of any shape of the decorative member.

5

6. The pull tab of a slide fastener slider according to claim 1,

the decorative member is continuous with a strut portion joined to the intermediate portion, and

10 the decorative member has a decorative portion opposite to the intermediate portion.

7. The pull tab of a slide fastener slider according to claim 6,

15 the decorative portion is in a shape of arrowhead.

8. The pull tab of a slide fastener slider according to claim 7,

20 the decorative portion in an arrowhead-shape has a hole pierced through both sides of the decorative portion.

9. The pull tab of a slide fastener slider according to claim 6,

25 the decorative portion has a part in a crescent-shape and a part in a star-shape.

10. The pull tab of a slide fastener slider according to claim 9,

the strut portion joining the decorative portion to
5 the intermediate portion is in a shape of rod.

11. The pull tab of a slide fastener slider according to claim 1,

the decorative portion has a plurality of disks which
10 are continuous with the intermediate portion.

12. The pull tab of a slide fastener slider according to claim 11,

at least one of a plurality of disks is annular ring
15 which has a hole pierced through both sides of the pull tab.

13. The pull tab of a slide fastener slider according to claim 1,

20 the decorative member is continuous with a strut portion joined to the intermediate portion, and

the decorative portion is protruded through the strut portion in a direction orthogonal to a direction through both sides of the pull tab.

25

14. The pull tab of a slide fastener slider according to claim 13,

the decorative portion is partly protruded through the strut portion.

5

15. The pull tab of a slide fastener slider according to claim 14,

the decorative portion is in a shape of plural petals.

10

16. A method of manufacturing a pull tab of a slide fastener slider, comprising :

wherein forming a core member is formed by joining connecting various decorative members to a slider body coupling member through an intermediate portion being in having a constantcertain shape;

accommodating any one of various core members in a cavity provided in a metal mold; and then

injection molding a resin through which the decorative member can be seen in order to cover the decorative member.

17. The method of manufacturing a pull tab of a slide fastener slider, according to claim 16,

various core member has the intermediate portion in a

certain shape,

the cavity is in a certain shape, and

the resin is injection molded around a part of the intermediate portion of the core member.
